This section will guide you on how to install the PL-2303 Windows Driver via Windows Update. You will need an Internet connection to be able to automatically download and install the drivers via Windows Update (for Windows Vista, 7, 8, and 8.1 only).

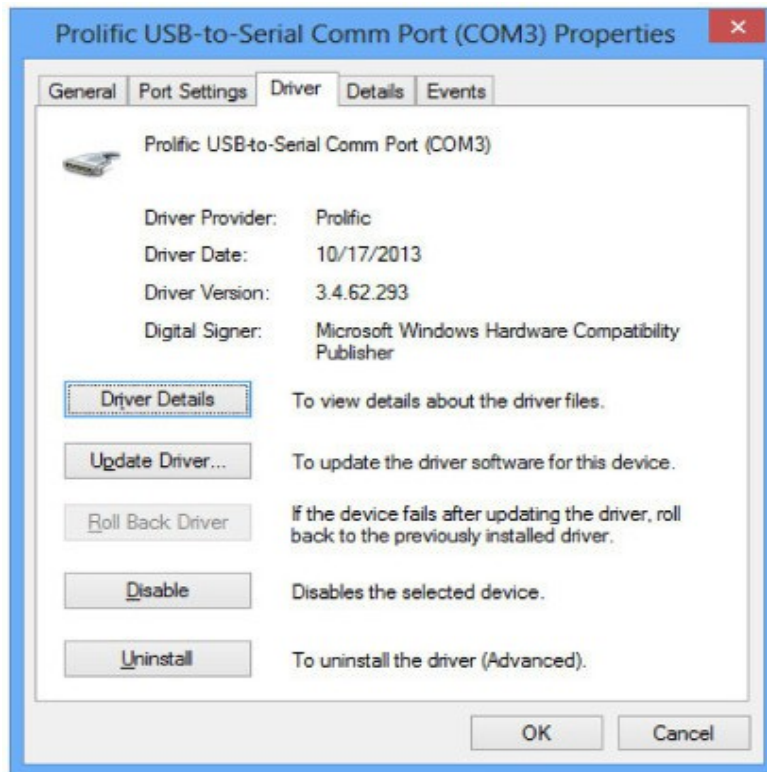

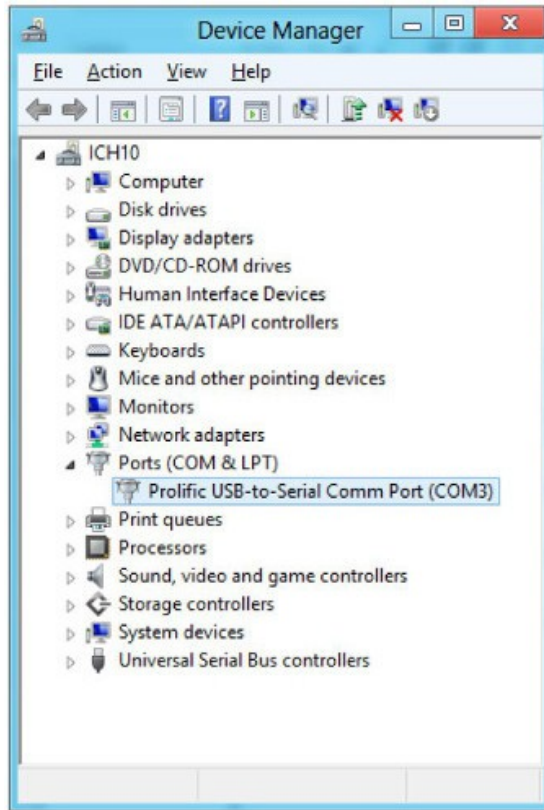

1. Check if your Internet connection is OK. Plug in PL-2303 USB to Serial cable.

2. Windows will automatically check Windows Update if driver is available and will download and install the driver instantly.

3. Windows will then prompt you that Prolific USB-to-Serial Comm Port (COMx) is installed and ready to use.

4. You can also right-click on the USB-Serial Controller device and click Update Driver.
